

EMULDRY 50

Residual insecticide effective on flying and crawling insects

- Non-flammable formulation
- Odourless
- Effective for 3 months
- Broad spectrum of activity: Flies, mosquitoes, bedbugs, cockroaches.
- Solvent free

APPLICATIONS

- Aeronautical, military, marine, industrial and community use
- Can be used with fogger: DAF 3000.
 - Safe to use by the operator
 - Product economy
 - Dry and homogeneous diffusion

TESTS & APPROVALS

- AMS 1450A – Boeing D6-7127
- Complies with the World Health Organisation's recommendations for the residual treatment of aircraft.
- Efficacy proved with machine-product referring to C.E.B. n° 135bis method.

HOW TO USE

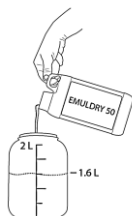

Concentrated formula is diluted in water.

1 litre of concentrate + 24 litres of water make 25 litres of the ready to use product.

0,4 litre of concentrate + 9,6 litres of water make 10 litres of the ready to use product.

For a better homogenization of quantities exceeding 10 liters, a pre-emulsification is recommended. The dilution water temperature should be between 20 and 40°C.

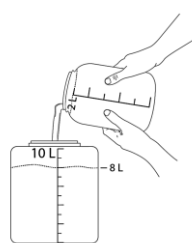

Example: To prepare 10 liters of ready to use product

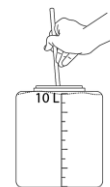

weight 400 grams of concentrated Emuldry 50 in a 2 liters drum with 1,6 liter of water.

Shake well until complete homogenization

then pour this mixture in the final container with 8 liters of water.

At this stage, simple mixing is enough to finalize the preparation.

Two application systems possible:

➤ **Fogging by DAF 3000**

1. Efficacy using the following doses 2.5ml/m³, for aircraft cabin and hold treatment.
2. For optimal treatment, open all the interior doors. Open and empty the lockers and cupboards. Pull curtains and window shutters. Remove the carpet's protective films.
3. Programme the machine, exit and close all the external doors. Automatic calculation of treatment length.
4. Do not enter the treated area before the end of the specified time (see machine specification sheet)

➤ **For manual spraying**

1. For optimal treatment, open all the doors. Open and empty the lockers and cupboards. Pull curtains and window shutters. Remove the carpet's protective films.
2. Spray the product diluted as follows:
 - 25ml/m² on the carpets to achieve a 0,5g/m² deposit
 - 10ml/m² on the other interior surfaces to achieve a 0,2g/m² deposit.

To treat aircraft cabins and holds, the quantities are:

 - . BOEING 747B.....25 litres of emulsion at 2%
 - . BOEING 737.....7 litres of emulsion at 2%
 - . DOUGLAS DC10.....16 litres of emulsion at 2%
 - . AIRBUS A30010 litres of emulsion at 2%
 - . AIRBUS A3109 litres of emulsion at 2%
3. Allow for drying time

SPECIFICATIONS

- Aspect: Liquid
- Colour: Yellow to brown
- Odour: Light
- Active ingredient: Permethrin 25/75
 - oral DL50 1479/4672 mg/kg on rat
 - dermal DL50 4000 mg/kg on rat

Use biocides safely. Before use read the label and product information.

PACKING

Packing	Units per box	Dimensions	Weight	Product code
EMULDRY 50 - 1 litre can	1	140x140x2 50	1kg	AR0005514

CERTIFICATIONS AND APPROVALS

- PSA certified ISO 9001 version 2008 (since 10/07/2006)
- NATO Code: FA2X6
